

PeAIce arXiv Lane — Series Map and Submission Pack

Manuel Coleman

Love Labs LCA / PeAIce Research Program

Lane scaffold · July 2026 · II.1 · β -Protocol · $h < 1$ · export 2026-07-08

Abstract

This pack records the PeAIce submit-facing arXiv lane: series IDs ARX-001 through ARX-006, claim discipline under Inspectable Intelligence (II.1), external grounding literature by arXiv abs ID, and the submission checklist. It is not a mathematical paper and does not claim proofs of the Riemann hypothesis or the Coleman conjecture.

1. Lane purpose

Internal PeAIce canon → arxiv/manuscripts → PDF/DOCX exports → arXiv upload (human account).

AI systems are never arXiv authors. OPEN targets stay OPEN until receipts land.

2. Series queue

ARX-001 · Grain Zero residual after Kekeya factorization · math.CA/MG · PRIORITY 1 · scaffold

ARX-002 · KNS(LB) typed object + two-layer decomposition · math.CA/MG · PRIORITY 2 · scaffold

ARX-003 · Trace-neutral Kekeya operator; closed det lanes · math.SP/NT · planned

ARX-004 · Prime-carrying carrier decision + missing rung · math.NT/SP · planned

ARX-005 · Coleman Conjecture (N-reading only) · later

ARX-006 · Inspectable Intelligence governance note · later, not pure-math first

3. Claim tags (required)

FORMAL · PROPOSED · OPEN · KNOWN · NUMERICS · CLOSED-NEGATIVE · CLOSED-POSITIVE · STRUCTURAL ANALOGY · OWED

Untagged load-bearing claims are publishing-ineligible under II.1.

4. External grounding (sample)

Kekeya R³: arXiv:2502.17655 (Wang–Zahl); arXiv:2601.14411 (Guth–Wang–Zahl)

Connes trace / prolate: math/9811068; arXiv:2310.18423

Suzuki canonical systems: arXiv:1606.05726; arXiv:1907.07838; arXiv:2606.09096

NB/BD: math/0202141; math/0607733; Noor Adv. Math. 2019

Krein shift: math/9904050 (Gesztesy–Makarov)

Full register: [arxiv/bibliography/grounding-register.md](#)

5. Pre-submit checklist (A-block)

Abstract does not claim RH or Coleman proved.

Definitions vs conjectures explicitly marked.

CLOSED-NEGATIVE routes not reopened without new structure.

Zeta firewall if Kakeya residual meets regularization.

Symbol-collapse firewall if K_σ / $\text{Re}(s)=\frac{1}{2}$ / μ / $\zeta(0)$ appear together.

No self-certification language.

6. Build locations
